

# COURSE ALERT: C-6-100

## CONDUCTING RADON SURVEYS IN SCHOOLS

### COURSE OVERVIEW:

Designed for both School Environmental Officers and Radon Professionals, this comprehensive course equips participants with the essential skills and knowledge to conduct accurate radon measurement surveys in school environments. Whether you're responsible for the safety of your school district or seeking continuing education as a radon professional, this course offers invaluable insights and practical tools.

### KEY BENEFITS:

- > **Comprehension of Radon Measurement Surveys in Schools:** Learn how to conduct thorough radon measurement surveys, ensuring the safety and well-being of students and staff.
- > **Quality Assurance:** Learn about optimal test placement and what to do if specific areas return with high radon level readings.
- > **Identify Need for Mitigation Support:** Better understand what unsafe radon measurements indicate and when to reach out to a licensed radon mitigator.
- > **Survey Management:** Acquire the skills to manage a radon measurement survey in a school.
- > **Continuing Education Credits:** Radon professionals can earn 6 CEUs upon completion, enhancing their expertise in school radon measurement surveys.

### A COURSE TAILORED FOR IMPACT

Initially created for Iowa, where legislation now requires radon measurement in all schools, this course is perfectly suited for any school district nationwide. Its content is not only specific to Iowa's requirements but also universally applicable, making it an ideal choice for any school district or radon professional seeking to become more knowledgeable in conducting school-based radon measurement surveys.
